Concepts in Action Nov 05 2022 This open access book is a timely contribution in presenting recent issues, approaches, and results that are not only central to the highly interdisciplinary field of concept research but also particularly important to newly emergent paradigms and challenges. The contributors present a unique, holistic picture for the understanding and use of concepts from a wide range of fields including cognitive science, linguistics, philosophy, psychology, artificial intelligence, and computer science. The chapters focus on three distinct points of view that lie at the core of concept research: representation, learning, and application. The contributions present a combination of theoretical, experimental, computational, and applied methods that appeal to students and researchers working in these fields.

Neurolaw and Responsibility for Action Aug 10 2020 Law regulates human behaviour, a phenomenon about which neuroscience has much to say. Neuroscience can tell us whether a defendant suffers from a brain abnormality, or injury and it can correlate these neural deficits with criminal offending. Using fMRI and other technologies it might indicate whether a witness is telling lies or the truth. It can further propose neuro-interventions to 'change' the brains of offenders and so to reduce their propensity to offend. And, it can make suggestions about whether a defendant knows or merely suspects a prohibited state of affairs; so, drawing distinctions among the mental states that are central to legal responsibility. Each of these matters has philosophical import; is a neurological 'deficit' inculpatory or exculpatory; what is the proper role for law if the mind is no more than the brain; is lying really a brain state and can neuroscience really 'read' the brain? In this edited collection, leading contributors to the field provide new insights on these matters, bringing to light the great challenges that arise when disciplinary boundaries merge.

Designing the Moment Feb 25 2022 The trick to great design is knowing how to think through each decision so that users don't have to. In *Designing the Moment: Web Interface Design Concepts in Action*, Robert Hoekman, Jr., author of *Designing the Obvious*, presents over 30 stories that illustrate how to put good design principles to work on real-world web application interfaces to make them obvious and compelling. From the first impression to the last, Hoekman takes a think out loud approach to interface design to show us how to look critically at design decisions to ensure that human beings, the kind that make mistakes and do things we don't expect, can walk away from our software feeling productive, respected, and smart.

Concept-Based Inquiry in Action Jul 01 2022 Create a thinking classroom that helps students move from the factual to the conceptual *Concept-Based Inquiry* is a framework for inquiry that promotes deep understanding. The key is using guiding questions to help students inquire into concepts and the relationships between them. *Concept-Based Inquiry in Action* provides teachers with the tools and resources necessary to organize and focus student learning around concepts and conceptual relationships that support the transfer of understanding. Step by step, the authors lead both new and experienced educators to implement teaching strategies that support the realization of inquiry-based learning for understanding in any K–12 classroom.

Goal Directed Behavior Mar 17 2021 Originally published in 1985, this book was an attempt at a comprehensive review of the psychology of action in various areas of psychology. It is also an attempt to bridge two languages and traditions in psychology: German and Anglo-American. Although Anglo-American psychology had had an enormous influence on German psychology, the influence had not gone the other way around - at least not in recent years. Therefore, this book attempts to get the two traditions to speak with each other. The main article, from one language area, and the following discussion, from the other language area, together result in an extensive treatment of an action-theoretic approach in the respective psychological area; thus, both the main article and "discussion" should be read together.

[The Case for Affirmative Action on Campus](#) Nov 12 2020 Why is affirmative action under attack? What were the policies original purposes, and have they been achieved? What are the arguments being arrayed against it? And for all stakeholders concerned about equity and diversity on campus what's the way forward, politically, legally and practically? This book engages all these issues.

From Ideas to Action Oct 12 2020 This book offers a guide, for companies, pension funds, asset managers, and other institutional investors, on how to commence the legal, governance, and financial strategies needed for effective climate mitigation and adaptation, and to help distribute the economic benefits of these actions to their stakeholders. It takes the reader from ideas to action, from first steps to a more meaningful contribution to the move towards a net zero carbon world. It can serve as a helpful guide to everyone implicated in a corporation's activities - employees, pensioners, consumers, banks and other lenders, policymakers, and community members. It offers insights into what we should be expecting, and asking, of these fiduciaries who have taken responsibility for effectively managing our savings, our retirement funds, our investments, and our tax dollars.

Why Forests? Why Now? Aug 29 2019 Tropical forests are an undervalued asset in meeting the greatest global challenges of our time—averting climate change and promoting development. Despite their importance, tropical forests and their ecosystems are being destroyed at a high and even increasing rate in most forest-rich countries. The good news is that the science, economics, and politics are aligned to support a major international effort over the next five years to reverse tropical deforestation. *Why Forests? Why Now?* synthesizes the latest evidence on the importance of tropical forests in a way that is accessible to anyone interested in climate change and development and to readers already familiar with the problem of deforestation. It makes the case to decisionmakers in rich countries that rewarding developing countries for protecting their forests is urgent, affordable, and achievable.

[Breakthrough Problem Solving with Action Learning](#) Sep 10 2020 *Breakthrough Problem Solving with Action Learning* explores why and how action learning groups have been so successful and creative in solving complex problems.

The text begins by briefly reviewing the theories that undergird the effectiveness of action learning, philosophically situating readers and pointing them in the direction of related academic works that they may wish to explore. It then turns to stories of how organizations have employed action learning in solving specific, often-encountered business problems. These cases not only serve as real-world models for how action learning can be successfully employed, but also offer inspiration and potential starting points and guidelines for other businesses that face similar problems. The book concludes with a cross-case analysis that pinpoints the ingredients necessary for breakthrough problem solving via action learning.

Action Research From Concept to Presentation: A Practical Handbook to Writing Your Master's Thesis Jan 27 2022 Perhaps the most daunting graduate school requirement is the development of an action research Master's thesis. This capstone task requires unprecedented amounts of time, energy, and verbiage. Designed to take stress out of the thesis-writing equation, this student-friendly comprehensive handbook glides the reader through a 28-step process from developing a focal topic to defending a scholarly thesis. Framing each chapter as a one-week action assignment, the authors have broken down the process into manageable chunks to enable students writers to achieve an immediate sense of completion at every step. By using this scaffolding approach the the authors encourage the student researcher to focus on one part of the process rather than the total, sometimes overwhelming, final product. With the exception of the "Review of the Literature" section which takes several weeks to complete, all other thesis sections can and should be timed out for seven days. The Authors primary objective was to empower the student researcher to accomplish each of the steps in the process while never losing sight on the product that will help the children in their classrooms. Whether developing an Abstract or writing in-text citations, student researchers are guided throughout the nuances of the Publication Manual of the American Psychological Associations, 6th Edition.

[Surge](#) Jun 07 2020 How many times have you had an idea that you were really passionate about—one that you really believed was important? How many times have you waited until you had the perfect amount of time or the perfect environment or the perfect set of circumstances to act on that idea? How many times have your ideas vanished into thin air because those "perfect" opportunities never came? No more. We've been on a two-decade quest to find better ways to take action on our ideas—and share those strategies with others. In this book, you'll learn exactly how to harness the power of now to take action on your ideas. You'll learn how to alleviate anxiety, face your fears, and overcome overwhelm—all so you can bring your ideas to life.

Atomic Habits Feb 02 2020 The #1 New York Times bestseller. Over 4 million copies sold! Tiny Changes, Remarkable Results No matter your goals, *Atomic Habits* offers a proven framework for improving—every day. James Clear, one of the world's leading experts on habit formation, reveals practical strategies that will teach you exactly how to form good habits, break bad ones, and master the tiny behaviors that lead to remarkable results. If you're having trouble changing your habits, the problem isn't you. The problem is your system. Bad habits repeat themselves again and again not because you don't want to change, but because you have the wrong system for change. You do not rise to the level of your goals. You fall to the level of your systems. Here, you'll get a proven system that can take you to new heights. Clear is known for his ability to distill complex topics into simple behaviors that can be easily applied to daily life and work. Here, he draws on the most proven ideas from biology, psychology, and neuroscience to create an easy-to-understand guide for making good habits inevitable and bad habits impossible. Along the way, readers will be inspired and entertained with true stories from Olympic gold medalists, award-winning artists, business leaders, life-saving physicians, and star comedians who have used the science of small habits to master their craft and vault to the top of their field. Learn how to: make time for new habits (even when life gets crazy); overcome a lack of motivation and willpower; design your environment to make success easier; get back on track when you fall off course; ...and much more. *Atomic Habits* will reshape the way you think about progress and success, and give you the tools and strategies you need to transform your habits—whether you are a team looking to win a championship, an organization hoping to redefine an industry, or simply an individual who wishes to quit smoking, lose weight, reduce stress, or achieve any other goal.

[Toward a Structural Theory of Action](#) Sep 22 2021 *Toward a Structural Theory of Action: Network Models of Social Structure, Perception, and Action* centers on the concept of social structure, perceptions, and actions, as well as the strategies through which these concepts guide empirical research. This book also proposes a model of status/role-sets as patterns of relationships defining positions in the social topology. This text consists of nine chapters separated into three parts. Chapter 1 introduces the goals and organization of the book. Chapters 2–4 provide analytical synopsis of available network models of social differentiation, and then use these models in describing actual stratification. Chapter 5 presents a model in which actor interests are captured. Subsequent chapter assesses the empirical adequacy of the two predictions described in this book. Then, other chapters provide a network model of constraint and its empirical adequacy. This book will be valuable to anthropologists, economists, political scientists, and psychologists.

Social Marketing Mar 29 2022 *Social Marketing* involves the application of marketing techniques (usually associated with promoting consumption) to social ends. This new addition will arm the socially conscious marketing student with: Case studies from across the globe, accessible exercises, engaging stories and online support with an expanded and enhanced companion website which will all enable you to think critically about the individual and systemic drivers of both harm and progress, and provide you with the tools to act. This popular introductory textbook has been thoroughly updated to enable students to challenge the bad, champion the good and become rebels with a cause. Now including more on systems thinking, evaluation and apps, Hastings and Domegan also introduce the influential new 3Cs model (Containment, Counter-Marketing, Critical Capacity Building). This book is essential reading for all social marketing, marketing ethics, and marketing and society courses. Cover Picture: 'La Sardane de la Paix' by Pablo Picasso. The sardane is a traditional circle dance from Catalonia which has come to symbolise the struggle of ordinary people against oppression, from Napoleon through Hitler and Franco and into the modern era. The individual dancer holds his or her hands in the air in a gesture of autonomy and empowerment, and is able to maintain what would quickly become a tiring stance thanks to the supporting hands of her fellow-dancers. It illustrates the key social marketing lesson that addressing complex social problems, such as climate change or inequalities – as with dictators - requires a combination of individual agency and collective action. It also shows that critical analysis, the questioning and challenging of the current system, lies at the heart of progressive social change, and that good social marketers should be rebels with a cause.

[Understanding Therapeutic Action \(Psychology Revivals\)](#) Jan 15 2021 Most of the existing psychodynamic literature approaches the treatment process from one particular theoretical perspective or another. Yet, what contemporary psychotherapists need most is practical information that transcends individual perspectives. After all, they must be able to treat patients who suffer from structural conflict, structural deficit, and relational conflict, and they must be able to understand the theories of therapeutic action associated with these concepts of psychopathology in relation to one another. Originally published in 1996, *Understanding Therapeutic Action: Psychodynamic Concepts of Cure* both surveys different theories of therapeutic action and offers an integrative model of treatment. Editor Lawrence E. Lifson has brought together contributors who are among the leading theoreticians and practitioners of psychodynamic psychotherapy. Their chapters' cover all the major perspectives on therapeutic action and are organized into sections covering structural and object relations theories; the self as the focus of therapeutic action; and an integrative approach to the concept of cure. The emphasis throughout is on the translation of theory into clinical practice, with attention given to the contributions of patient and therapist alike in the curative process. Providing clinicians with a comprehensive overview and synthesis of the different models of therapeutic action, this collection is an illuminating exercise in comparative psychotherapy and a valuable tool for enhancing the applicability and effectiveness of clinical work.

Education, Self-consciousness and Social Action Jul 09 2020 Education, Self-consciousness and Social Action reconstructs the Hegelian concept of education, Bildung, and shows that this concept could serve as a powerful alternative to current psychologist notions of learning. Taking a Hegelian perspective, Stojanov claims that Bildung should be interpreted as growth of mindedness and that such a growth has two central and interrelated components, including the development of self-consciousness toward conceptual self-articulation and the formation of one's capacity for intelligent social action. The interrelation between the two central components of education implies that learning is transformed into education only when it involves the self-consciousness and the identity of the learner. Since both are grounded in the ethical beliefs and values of the individual, transforming learning into education therefore requires that education also address students' everyday ethical assumptions, as well as their articulation and conceptualization. This claim has a number of implications for educational policy and pedagogy; one being that learning and teaching in schools are educative only if they have ethical significance for both students and teachers. Another implication is that the point of departure for educative teaching becomes the actual, everyday ethical beliefs and experiences of the students, rather than fixed curricular contents. Students' encountering with sciences and arts should aim at the conceptual articulation of those beliefs and experiences – an articulation which makes individual's rational autonomy and self-determination possible. Education, Self-consciousness and Social Action will be of great interest to academics, researchers and postgraduate students interested in the philosophy of education. It should also be essential reading for anyone engaged in the study of Hegel's work.

Start with Why Aug 22 2021 The inspirational bestseller that ignited a movement and asked us to find our WHY Discover the book that is captivating millions on TikTok and that served as the basis for one of the most popular TED Talks of all time—with more than 56 million views and counting. Over a decade ago, Simon Sinek started a movement that inspired millions to demand purpose at work, to ask what was the WHY of their organization. Since then, millions have been touched by the power of his ideas, and these ideas remain as relevant and timely as ever. START WITH WHY asks (and answers) the questions: why are some people and organizations more innovative, more influential, and more profitable than others? Why do some command greater loyalty from customers and employees alike? Even among the successful, why are so few able to repeat their success over and over? People like Martin Luther King Jr., Steve Jobs, and the Wright Brothers had little in common, but they all started with WHY. They realized that people won't truly buy into a product, service, movement, or idea until they understand the WHY behind it. START WITH WHY shows that the leaders who have had the greatest influence in the world all think, act and communicate the same way—and it's the opposite of what everyone else does. Sinek calls this powerful idea The Golden Circle, and it provides a framework upon which organizations can be built, movements can be led, and people can be inspired. And it all starts with WHY.

Drug Design Apr 17 2021 Unique work on structure-based drug design, covering multiple aspects of drug discovery and development. Fully colored, many images, computer animations of 3D structures (these only in electronic form). Makes the spatial aspects of interacting molecules clear to the reader, covers multiple applications and methods in drug design. Structures by mode of action, no therapeutic areas. Of high relevance for academia and industrial research. Focus on gene technology in drug design, omics-technologies computational methods experimental techniques of structure determination multiple examples on mode of action of current drugs, ADME-tox properties in drug development, QSAR methods, combinatorial chemistry, biologicals, ribosome, targeting protein-protein interfaces.

Hegel's Concept of Action Aug 02 2022 This book is an important gateway through which professional analytic philosophers and their students can come to understand the significance of Hegel's philosophy for contemporary theory of action. As such it will contribute to the erosion of the sterile barrier between the continental and analytic approaches to philosophy. Michael Quante focuses on what Hegel has to say about such central concepts as action, person and will, and then brings these views to bear on contemporary debates in analytic philosophy. Crisply written, this book will thus address the common set of preoccupations of analytic philosophers of mind and action, and Hegel specialists.

Information Systems Action Research Feb 13 2021 This book uses action research to conduct research activities in information technology and systems. It covers the methodological issues that arise when action research methods are conducted, provides examples of action research in practice, and summarizes the philosophical foundations of action research and its application as a methodology in Information Systems research and research programs.

Perpetrators and Perpetration of Mass Violence Jul 29 2019 As the most comprehensive edited volume to be published on perpetrators and perpetration of mass violence, the volume sets a new agenda for perpetrator research by bringing together contributions from such diverse disciplines as political science, sociology, social psychology, history, anthropology and gender studies, allowing for a truly interdisciplinary discussion of the phenomenon of perpetration. The cross-case nature of the volume allows the reader to see patterns across case studies, bringing findings from inter alia the Holocaust, the genocides in Rwanda and the former Yugoslavia, and the civil wars in Cambodia and Côte d'Ivoire into conversation with each other. The chapters of this volume are united by a common research interest in understanding what constitutes perpetrators as actors, what motivates them, and how dynamics behind perpetration unfold. Their attention to the interactions between disciplines and cases allows for the insights to be transported into more abstract ideas on perpetration in general. Amongst other aspects, they indicate that instead of being an extraordinary act, perpetration is often ordinary, that it is crucial to studying perpetrators and perpetration not from looking at the perpetrators as actors but by focusing on their deeds, and that there is a utility of ideologies in explaining perpetration, when we differentiate them more carefully and view them in a more nuanced light. This volume will be vital reading for students and scholars of genocide studies, human rights, conflict studies and international relations.

Forces and Fields Apr 29 2022 This history of physics focuses on the question, "How do bodies act on one another across space?" The variety of answers illustrates the function of fundamental analogies or models in physics, as well as the role of so-called unobservable entities. Forces and Fields presents an in-depth look at the science of ancient Greece, and it examines the influence of antique philosophy on seventeenth-century thought. Additional topics embrace many elements of modern physics—the empirical basis of quantum mechanics, wave-particle duality and the uncertainty principle, and the action-at-a-distance theory of Wheeler and Feynman. The introductory chapter, in which the philosophical view is developed, can be omitted by readers more interested in history. Author Mary B. Hesse examines the use of analogies in primitive scientific explanation, particularly in the works of Aristotle, and contrasts them with latter-day theories such as those of gravitation and relativity. Hesse incorporates studies of the Pre-Socratics initiated by Francis Cornford and continued by contemporary classical historians. Her perspective sheds considerable light on the scientific thinking of antiquity, and it highlights the debt that the seventeenth-century natural philosophers owed to Greek ideas.

Human Action and Its Explanation Nov 24 2021 This book presents a unified and systematic philosophical account of human actions and their explanation, and it does it in the spirit of scientific realism. In addition, various other related topics, such as psychological concept formation and the nature of mental events and states, are discussed. This is due to the fact that the key problems in the philosophy of psychology are interconnected to a high degree. This interwovenness has affected the discussion of these problems in that often the same topic is discussed in several contexts in the book. I hope the reader does not find this too frustrating. The theory of action developed in this book, especially in its latter half, is a causalist one. In a sense it can be regarded as an explication and refinement of a typical common sense view of actions and the mental episodes causally responsible for them. It has, of course, not been possible to discuss all the relevant philosophical problems in great detail, even if I have regarded it as necessary to give a brief treatment of relatively many problems. Rather, I have concentrated on some key issues and hope that future research will help to clarify the rest.

The Concept of Action Oct 31 2019 When people do things with words, how do we know what they are doing? Many scholars have assumed a category of things called actions: 'requests', 'proposals', 'complaints', 'excuses'. The idea is both convenient and intuitive, but as this book argues, it is a spurious concept of action. In interaction, a person's primary task is to decide how to respond, not to label what someone just did. The labeling of actions is a meta-level process, appropriate only when we wish to draw attention to others' behaviors in order to quiz, sanction, praise, blame, or otherwise hold them to account. This book develops a new account of action grounded in certain fundamental ideas about the nature of human sociality: that social conduct is naturally interpreted as purposeful; that human behavior is shaped under a tyranny of social accountability; and that language is our central resource for social action and reaction.

Systems Concepts in Action May 19 2021 Systems Concepts in Action: A Practitioner's Toolkit explores the application of systems ideas to investigate, evaluate, and intervene in complex and messy situations. The text serves as a field guide, with each chapter representing a method for describing and analyzing; learning about; or changing and managing a challenge or set of problems. The book is the first to cover in detail such a wide range of methods from so many different parts of the systems field. The book's Introduction gives an overview of systems thinking, its origins, and its major subfields. In addition, the introductory text to each of the book's three parts provides background information on the selected methods. Systems Concepts in Action may serve as a workbook, offering a selection of tools that readers can use immediately. The approaches presented can also be investigated more profoundly, using the recommended readings provided. While these methods are not intended to serve as "recipes," they do serve as a menu of options from which to choose. Readers are invited to combine these instruments in a creative manner in order to assemble a mix that is appropriate for their own strategic needs.

Contemporary Theories of Career Development Sep 30 2019 In response to the complexities of social change that have become evident in the 21st century, there is a need for innovation in career theory that takes into account new perspectives and the fluctuating contexts of people's lives. Contemporary Theories of Career Development: International Perspectives brings together the contributions of theorists from around the globe whose work represents current, cutting-edge international approaches to career development theory. Emphasizing the new perspectives that are needed for this field to be relevant in a contemporary era, this book considers the cultural applications of theory in a diverse range of populations. Structured in three parts with chapters written by internationally renowned leaders in the field, this collection features a critical examination of the current history of the field; thirteen theory chapters, each enhanced by a case study; and a final chapter that draws the previous chapters together through key themes, broadening the reader's knowledge of theoretical perspectives and their interrelations. Each theory chapter author comments on and critiques his or her own theory, inviting readers to engage with these theories at both a practical and theoretical level through the case studies. Detailed, with reader-friendly descriptions and supplemented by international research, case examples, and discussion questions, Contemporary Theories of Career Development: International Perspectives is the ideal reference work for students studying the topic as well as a stimulus for researchers and practitioners looking to implement the theories in their work.

Concepts in Thought, Action, and Emotion Sep 03 2022 In recent years, the idea of a concept has become increasingly central to different areas of philosophy. This collection of original essays presents philosophical perspectives on the link between concepts and language, concepts and experience, concepts and know-how, and concepts and emotion. The essays span a variety of interrelated philosophical domains ranging from epistemology, philosophy of language, philosophy of mind, philosophy of action, and the philosophy of emotions. Among the central questions addressed by the contributors are: What are concepts? What is nonconceptual content? Does perceptual experience have conceptual content? Is conceptual thought language dependent? How do we form new concepts? Does practical knowledge have propositional content? Is practical understanding conceptual (without being propositional)? Do emotions have a representational content and if so, is the representational content conceptual? Concepts in Thought, Action, and Emotion advances current debates about concepts and will interest scholars across a broad range of philosophical disciplines.

Rust in Action Oct 24 2021 "This well-written book will help you make the most of what Rust has to offer." - Ramnivas Laddad, author of AspectJ in Action Rust in Action is a hands-on guide to systems programming with Rust. Written for inquisitive programmers, it presents real-world use cases that go far beyond syntax and structure. Summary Rust in Action introduces the Rust programming language by exploring numerous systems programming concepts and techniques. You'll be learning Rust by delving into how computers work under the hood. You'll find yourself playing with persistent storage, memory, networking and even tinkering with CPU instructions. The book takes you through using Rust to extend other applications and teaches you tricks to write blindingly fast code. You'll also discover parallel and concurrent programming. Filled to the brim with real-life use cases and scenarios, you'll go beyond the Rust syntax and see what Rust has to offer in real-world use cases. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology Rust is the perfect language for systems programming. It delivers the low-level power of C along with rock-solid safety features that let you code fearlessly. Ideal for applications requiring concurrency, Rust programs are compact, readable, and blazingly fast. Best of all, Rust's famously smart compiler helps you avoid even subtle coding errors. About the book Rust in Action is a hands-on guide to systems programming with Rust. Written for inquisitive programmers, it presents real-world use cases that go far beyond syntax and structure. You'll explore Rust implementations for file manipulation, networking, and kernel-level programming and discover awesome techniques for parallelism and concurrency. Along the way, you'll master Rust's unique borrow checker model for memory management without a garbage collector. What's inside Elementary to advanced Rust programming Practical examples from systems programming Command-line, graphical and networked applications About the reader For intermediate programmers. No previous experience with Rust required. About the author Tim McNamara uses Rust to build data processing pipelines and generative art. He is an expert in natural language processing and data engineering.
