### **Environmental Participation**

Jun 07 2020 This book introduces environmental

participation as a distinct field comprising diverse practices. It presents examples of public participation specifically in environmental science, decision making and expertise. The first chapter introduces the science studies perspective and the key concepts that underpin the argument for approaching such a range of practices as a coherent field. The following three chapters explore a wide range of practical examples of how the public can participate in all three domains. Drawing on her experience with a variety of transdisciplinary projects Landström discusses topics including the coproduction of knowledge about flooding, community involvement with radioactive waste disposal and collaborative water quality modelling. She then goes on to cover citizen science and social movement expertise as environmental participation practices. The concluding chapter reflects on the challenges as well as future opportunities of environmental participation. This book is

Statistics for Geography and Environmental Science Oct 31

2019 Statistics are important tools for validating theory, making predictions and engaging in policy research. They help to provide informed commentary about social and environmental issues, and to make the case for change. Knowledge of statistics is therefore a necessary skill for any student of geography or environmental science. This textbook is aimed at students on a degree course taking a module in statistics for the first time. It focuses on analysing, exploring and making sense of data in areas of core interest to

physical and human geographers, and to environmental scientists. It covers the subject in a broadly conventional way from descriptive statistics, through inferential statistics to relational statistics but does so with an emphasis on applied data analysis throughout.

Baas Becking's Geobiology Jun 27 2019 Laurens Baas Becking was a pioneer in the field of microbial ecology and the father of Geobiology. This is the first English translation of Baas Becking's *Geobiologie: of Inleiding tot de Millieukunde* published in Dutch in 1934. This book provides a fascinating view of how organisms have both adapted to and shaped their environment, from all types of settings ranging from lakes to the oceans, to acidic peats and salt ponds, drawing heavily on Baas Becking's own keen observations. Although written 80 years ago, Baas Becking's insights feel surprisingly modern and provide a unique insight into the fields of evolution of microbial ecology and geobiology. This book should appeal to anyone interested in microbial ecology, geobiology, biogeochemistry and the history of science. The translated text is accompanied by extensive footnotes and by

an Editor's summary at the end of each chapter placing Baas Becking's writing in the context of modern developments in the field. The Environmental Science of Drinking Water Jul 29 2019 In today's chemically dependent society, environmental studies demonstrate that drinking water in developed countries contains numerous industrial chemicals, pesticides, pharmaceuticals and chemicals from water treatment processes. This poses a real threat. As a result of the ever-expanding list of chemical and biochemical products industry, current drinking water standards that serve to preserve our drinking water quality are grossly out of date. *Environmental Science of Drinking Water* demonstrates why we need to make a fundamental change in our approach toward protecting our drinking water. Factual and circumstantial evidence showing the failure of current drinking water standards to adequately protect human health is presented along with

analysis of the extent of pollution in our water resources and drinking water. The authors also present detail of the currently available state-of-the-art technologies which, if fully employed, can move us toward a healthier future. \* Addresses the international problems of outdated standards and the overwhelming onslaught of new contaminants. \* Includes new monitoring data on non-regulated chemicals in water sources and drinking water. \* Includes a summary of different bottled waters as well as consumer water purification technologies.

**Excel 2019 for Environmental Sciences Statistics** Dec 14 2020 This book shows the capabilities of Microsoft Excel in teaching environmental science statistics effectively. Similar to the previously published Excel 2016 for Environmental Sciences Statistics, this book is a step-by-step, exercise-driven guide for students and practitioners who need to master Excel to solve practical environmental science problems. If understanding statistics isn't the reader's strongest suit, the reader is not mathematically inclined, or if the reader is new to computers or to Excel, this is the book to start off with. Excel, a widely available computer program for students and managers, is also an effective teaching and learning tool for quantitative analyses in environmental science courses. Its powerful computational ability and graphical functions make learning statistics much easier than in years past. Excel 2019 for Environmental Sciences Statistics: A Guide to Solving

Practical Problems capitalizes on these improvements by teaching students and managers how to apply Excel to statistical techniques necessary in their courses and work. In this new edition, each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific, easy-to-understand environmental science problems. Practice problems are provided at the end of each chapter with their solutions in an appendix. Separately, there is a full practice test (with answers in an appendix) that allows readers to test what they have learned.
