Sacred Worlds Feb 08 2021 This book, the first in the field for two decades, looks at the relationships between geography and religion. It represents a synthesis of research by geographers of many countries, mainly since the 1960s. No previous book has tackled this emerging field from

such a broad, interdisciplinary perspective, and never before have such a variety of detailed case studies been pulled together in so comparative or illuminating a way. Examples and case studies have been drawn from all the major world religions and from all continents from both a historical and contemporary perspective. Major themes covered in the book include the distribution of religion and the processes by which religion and religious ideas spread through space and time. Some of the important links between religion and population are also explored. A great deal of attention is focused on the visible manifestations of religion on the cultural landscape, including landscapes of worship and of death, and the whole field of sacred space and religious pilgrimage.

Cultural Education - Cultural Sustainability Oct 26 2019 This volume is a path-breaking contribution to the study of efforts of diaspora, indigenous, and minority groups, broadly defined, to use education (formal and informal) to sustain cultural continuity while grappling with the influences and demands of wider globalizing, nationalizing, or other homogenizing and assimilatory forces. Particular attention is given to groups that use educational elements other than second-language teaching alone in programs to sustain their particular cultural traditions. The focus of the book on cultural sustainability changes the nature of questions posed in multicultural education from those that address the opening of boundaries to issues of preserving boundaries in an open yet sustainable way. As forced and elective immigration trends are changing the composition of societies and the

educational systems within them -- bringing a rich diversity of cultural experience to the teaching/learning process -- diaspora, indigenous, and minority groups are looking more and more for ways to sustain their cultures in the context of wider socio-political influences. This volume is a first opportunity to consider critically multicultural efforts in dialogue with educational options that are culturally particularistic but at the same time tolerant. Academics will find this an excellent reference book. Practitioners will draw inspiration in learning of others' efforts to sustain cultures, and will engage in critical reflection on their own work vis-à-vis that of others. Teachers will realize they do not stand alone in their educational efforts and will uncover new strategies and methodologies through which to approach their work.

Prayer in the City Aug 24 2019 This volume envisions social practices surrounding mosques, shrines and public spaces in urban contexts as a window on the diverse ways in which Muslims in different regional and historical settings imagine, experience, and inhabit places and spaces as »sacred«. Unlike most studies on Muslim communities, this volume focuses on cultural, material and sensuous practices and urban everyday experience. Drawing on a range of analytical perspectives, the contributions examine spatial practices in Muslim societies from an interdisciplinary perspective, an approach which has been widely neglected both in Islamic studies and social sciences.

Shrinking Cities Jul 04 2020 This book examines a rapidly emerging new topic in urban settlement patterns: the role of shrinking cities. Much coverage is given to declining fertility rates, ageing populations and economic restructuring as the factors behind shrinking cities, but there is also reference to resource depletion, the demise of single-company towns and the micro-location of environmental hazards. The contributions show that shrinkage can occur at any scale – from neighbourhood to macro-region - and they consider whether shrinkage of metropolitan areas as a

whole may be a future trend. Also addressed in this volume is the question of whether urban shrinkage policies are necessary or effective. The book comprises four parts: world or regional issues (with reference to the European Union and Latin America); national case studies (the United States, India, China, Korea, Taiwan, Germany, Romania and Estonia); city case studies (Detroit, Buffalo, Cleveland, Naples, Belfast and Halle); and broad issues such as the environmental consequences of shrinking cities. This book will be of interest to scholars and practitioners working in the fields of urban studies, economic geography and public policy.

Learning in Likely Places Sep 29 2022 In this collection of nineteen case studies, edited by John Singleton, the contributors describe the transferral of knowledge and practice within particular communities of Japanese artisans, workers, artists, musicians, and professionals. Together, the essays aim to demonstrate the rich variety of pedagogical arrangements and learning patterns, both historical and contemporary, through which the Japanese pass on both cultural and practical knowledge.

Place- and Community-Based Education in Schools Aug 17 2021 Place- and community-based education - an approach to teaching and learning that starts with the local - addresses two critical gaps in the experience of many children now growing up in the United States: contact with the natural world and contact with community. It offers a way to extend young people's attention beyond

the classroom to the world as it actually is, and to engage them in the process of devising solutions to the social and environmental problems they will confront as adults. This approach can increase students' engagement with learning and enhance their academic achievement. Envisioned as a primer and guide for educators and members of the public interested in incorporating the local into schools in their own communities, this book explains the purpose and nature of place- and community-based education and provides multiple examples of its practice. The detailed descriptions of learning experiences set both within and beyond the classroom will help readers begin the process of advocating for or incorporating local content and experiences into their schools.

Modern Architecture in Historic Cities Jul 24 2019 Modern Architecture in Historic Cities illustrates why France has been so successful in combining conservation and modernity, and points to important lessons for other countries which can be drawn from the French experience. Beginning with an empirical review of particular events which have affected attitudes towards heritage in France, this book highlights the continuity in French thinking and the longstanding role of the French government as patron and leader. Planning, conservation and design control legislation are examined, highlighting the range of instruments available to government in order to influence results and enhance the role of the architectural profession.

Research Methods in Language Variation and Change Jan 28 2020 Methodological know-how has become one of the key qualifications in contemporary linguistics, which has a strong empirical focus. Containing 23 chapters, each devoted to a different research method, this volume brings together the expertise and insight of a range of established practitioners. The chapters are arranged in three

parts, devoted to three different stages of empirical research: data collection, analysis and evaluation. In addition to detailed step-by-step introductions and illustrative case studies focusing on variation and change in English, each chapter addresses the strengths and weaknesses of the methodology and concludes with suggestions for further reading. This systematic, state-of-the-art survey is ideal for both novice researchers and professionals interested in extending their methodological repertoires. The book also has a companion website which provides readers with further information, links, resources, demonstrations, exercises and case studies related to each chapter.

FORBIDDEN PLACES STRANGE FACES Feb 20 2022 The Author has a unique, artistic and romantic mind, with a special way of seeing and describing the world, and this time a very special way of travelling, with no plan, no map, no idea, therefore thinking what could possibly go wrong? He describes a journey he took through parts of Asia on a small budget fuelled with big dreams, following instincts and longing to find the legendary Shangrilla, timeless valleys, and revelations for inner growth. With Chorma's smile still warm in his heart, he sets off walking down a forbidden road through Tibet, hoping to reach Lhasa. The travel Gods answered his prayers as they often do when you ask, but he forgot to say exactly how he wished to get there! His writing style and artistic imagination will take you spiralling down infinite thoughts, hilarious situations and potential oblivion, sometimes floating, sometimes soaring, but always eventually appearing in wonderland drinking tea with the mad hatter himself. You will not want to put it down, just like travelling, eager to see what is just around the next corner?

The Oxford Handbook of Crime Prevention Oct 19 2021 How can a society prevent-not deter, not punish-but prevent crime? Criminal justice prevention, commonly called crime control, aims to prevent crime after an initial offence has been committed through anything from an arrest to a death penalty sentence. These traditional means have been frequently examined and their efficacy just as frequently questioned. Promising new forms of crime prevention have emerged and expanded as important components of an overall strategy to reduce crime. Crime prevention today has developed along three lines: interventions to improve the life chances of children and prevent them from

embarking on a life of crime; programs and policies designed to ameliorate the social conditions and institutions that influence offending; and the modification or manipulation of the physical environment, products, or systems to reduce everyday opportunities for crime. Each strategy aims at preventing crime or criminal offending in the first instance - before the act has been committed. Each, importantly, takes place outside of the formal criminal justice system, representing an alternative, perhaps even socially progressive way to reduce crime. The Oxford Handbook of Crime Prevention is a comprehensive, up-to-date, and authoritative review of research on crime prevention. Bringing together top scholars in criminology, public policy, psychology, and sociology, this Handbook includes critical reviews of the main theories that form the basis of crime prevention, evidence-based assessments of the effectiveness of the most important interventions, and cross-cutting essays that examine implementation, evaluation methodology, and public policy. Covering the three major crime prevention strategies active today-developmental, community, and situational-this definitive volume addresses seriously and critically the ways in which the United States and the Western world have attempted, and should continue to strive for the of crime.

Cities in a Time of Terror: Space, Territory, and Local Resilience Dec 29 2019 This book is about urban terror - its meaning, its ramifications, and its impact on city life. Written by a well-known expert in the field, "Cities in a Time of Terror" draws on data from more than a thousand cities across the globe and traces the evolution of urban terrorism between 1968 and 2006. It explains what kinds of cities have become prime targets, why terrorism has become increasingly lethal, and how its inspiration has changed from secular to religious. The author describes urban terrorism as an attempt to use the city's own strength against itself, forcing it to implode, and delineates three

basic logics of terrorist choices for targeting cities. The book also includes a discussion of local resilience - the city's capacity to bounce back from attack - and suggests how that can be sustained. Examples from New York, London, Jerusalem, Istanbul, Moscow, Paris, and Madrid illustrate the book's central themes.

Paths and Rivers Nov 07 2020 Fieldwork extending over a thirty-year period provided materials for this book. Paths and Rivers offers an unusually deep and broad picture of the Sa'dan Toraja as a society in dynamic transition over the course of the past century. The Toraja inhabit the mountainous highlands of South Sulawesi, Indonesia, and are well known for their dramatic architecture, their unusual cliff burials, and their flamboyant ceremonial life, which places extraordinary economic demands on individuals and families. The analysis is informed, firstly, by a comparative perspective which sets Toraja social structure in the context of the Austronesian world. Secondly, the author delves deeply into Toraja social memory to show how people think about the past. She examines the usefulness of history and myth in the present as a source of identity, a template for action, or a resource by means of which to claim precedence. The book gives a clear picture of the structure and ethos of the indigenous Toraja religion, the Aluk To Dolo or "Way of the Ancestors", with its complex cycle of rituals. The book concludes with an analysis of the ceremonial economy, which draws upon both domestic subsistence production and the global market economy.

Capital Cities: Varieties and Patterns of Development and Relocation Oct 31 2022 The issue of capital city relocation is a topic of debate for more than forty countries across the world. In this first book to discuss the issue, Vadim Rossman offers an in-depth analysis of the subject,

highlighting the global trends and the key factors that motivate different countries to consider such projects, analyzing the outcomes and drawing lessons from recent capital city transfers worldwide for governments and policy-makers. Capital Cities studies the approaches and the methodologies that inform such decisions and debates. Special attention is given to the study of the universal patterns of relocation and patterns specific to particular continents and mega-regions and particular political regimes. The study emphasizes the role of capital city transfers in the context of nation- and state-building and offers a new framework for thinking about capital cities, identifying six strategies that drive these decisions, representing the economic, political, geographic, cultural and security considerations. Confronting the popular hyper-critical attitudes towards new designed capital cities, Vadim Rossman shows the complex motives that underlie the proposals and the important role that new capitals might play in conflict resolution in the context of ethnic, religious and regional rivalries and federalist transformations of the state, and is seeking to identify the success and failure factors and more efficient implementation strategies. Drawing upon the insights from spatial economics, comparative federalist studies, urban planning and architectural criticism, the book also traces the evolution of the concept of the capital city, showing that the design, iconography and the location of the capital city play a critical role in the success and the viability of the state.

Gaming Cultures and Place in Asia-Pacific Apr 12 2021 This collection explores the relationship between digital gaming and its cultural context by focusing on the burgeoning Asia-Pacific region. Encompassing key locations for global gaming production and consumption such as Japan, China,

and South Korea, as well as increasingly significant sites including Australia and Singapore, the region provides a wealth of divergent examples of the role of gaming as a socio-cultural phenomenon. Drawing from micro ethnographic studies of specific games and gaming locales to macro political economy analyses of techno-nationalisms and trans-cultural flows, this collection provides an interdisciplinary model for thinking through the politics of gaming production, representation, and consumption in the region.

Urban Transformations Mar 31 2020 Cities affect every person's life, yet across the traditional divides of class, age, gender and political affiliation, armies of people are united in their dislike of the transformations that cities have undergone in recent times. The physical form of the urban environment is not a designer add-on to 'real' social issues; it is a central aspect of the social world. Yet in many people's experience, the cumulative impacts of recent urban development have created widely un-loved urban places. To work towards better-loved urban environments, we need to understand how current problems have arisen and identify practical action to address them. *Urban Transformations* examines the crucial issues relating to how cities are formed, how people use these urban environments and how cities can be transformed into better places. Exploring the links between the concrete physicality of the built environment and the complex social, economic, political and cultural processes through which the physical urban form is produced and consumed, Ian Bentley proposes a framework of ideas to provoke and develop current debate and new forms of practice.
